Notes:

- (1) The total capacity on-grid mode refers to the settlement of all electricity generated by a power plant with the grid; while the surplus capacity on-grid mode means that a portion of the electricity generated by a power plant is sold directly to the end-user and the surplus electricity is settled with the grid.
- (2) Some of the solar power plants of the Group achieved grid-connection with installed capacity of approximately 97MW in total in Q3 of 2022.
- (3) The Group completed the acquisitions of the entire equity interests in four project companies in Q3 of 2022.
- (4) The construction of a solar power plant with installed capacity of 57MW located in Jiangxi, China is completed and the solar power plant achieved grid-connection in Q3 of 2022.
- (5) The operation figures previously announced have been adjusted to be in line with the available accounting figures and to reflect the change(s) in the Group's portfolio of power plants with effect from each transaction's respective completion date.
- (6) The figures provided herein are subject to rounding adjustment and will be subject to other possible adjustments due to accounting procedures.

Shareholders and/or potential investors of the Company are hereby reminded that the information provided above merely represents the preliminary operating performance of the renewable energy power plants beneficially owned by the Group as of 30 September 2022 based on data currently available to the management, and is by no means a representation or a basis of reference or indication of the revenue or profit to be generated or derived by the Group or any financial performance of the Group in Q3 of 2022 or for the nine months ended 30 September 2022. Accordingly, shareholders and/or potential investors of the Company are advised to exercise caution when dealing in the securities of the Company.
